

Objectives Contribution From Events

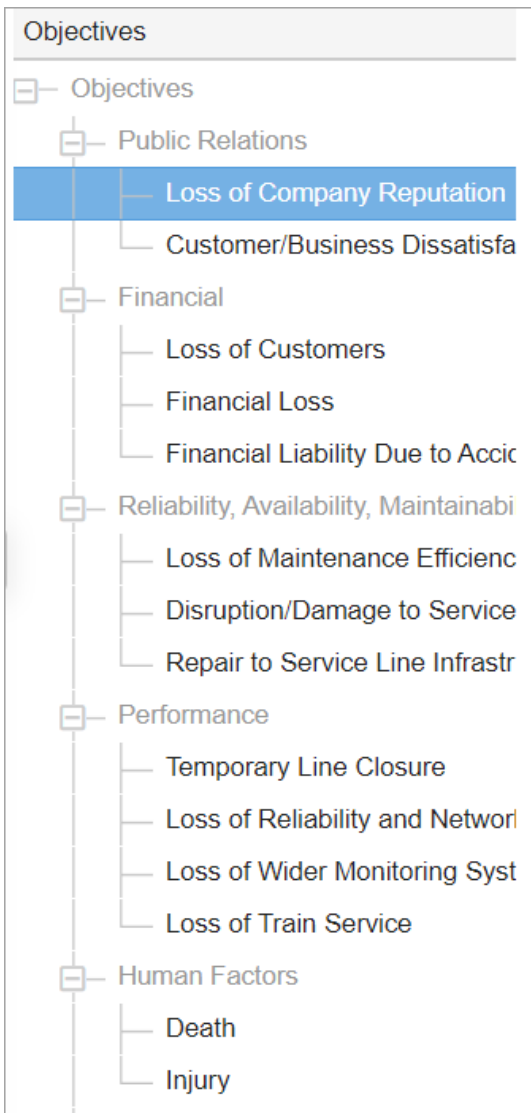

The Objectives Contribution From Events page allows you to define the contributions ([Consequences Grid](#)) in a mindmap or chart format.

The screenshot shows the 'IMPACT OF EVENTS' tab in a software application. On the left, a tree view lists various objectives, with 'Loss of Company Reputation' highlighted. The main workspace displays a mindmap titled '"Loss of Company Reputation" Impacts to Objectives for project Intelligent Event London Underground Monitoring'. The central node is 'Objective: Loss of Company Reputation', which is connected to six event nodes: 'Late Train Running', 'Line Closure', 'Failed Integration with Future Monitoring System Network', 'Intelligent Event Monitoring Network Shut Down', 'Major Train Work Accident', and 'Major Train Public Accident'.

This is similar to [Event Consequences To Objectives](#), but instead of selecting the event, we select the objective node and then specify all the events the selected objective is impacted on.

You can select an objective from the Impact Hierarchy:

You can only assign contributions to covering objectives, this is why the non-covering nodes are disabled.

You can add a new event by clicking [+ New Event](#)

A modal will pop out where you will enter the event names -- one event per line.

Add Events ✕

📘 Add new events here (press carriage return to add second and third):

Event1
Event2
